

The hero section of the Panda Adaptive Defense website features a dark blue background with a network of glowing nodes and connections. At the top, a navigation bar includes the Panda logo (a WatchGuard brand), and menu items for Business, Adaptive Defense, Solutions, Partners, References, and Resources. On the right, there are links for Support, Offices, Blog, and English. The main headline reads "A New Cybersecurity Paradigm is Born." followed by "Integrated Endpoint Protection Platform, EDR and 100% Attestation Service." A vertical blue button on the right says "TALK TO AN EXPERT". A green play button icon is positioned above a "Watch video" link. At the bottom left, an orange button says "LIVE DEMO".

The Solution

Panda Adaptive Defense is a security suite that integrates Endpoint Protection and Endpoint Detection and Response (EDR) solutions, with a unique 100% Attestation Service, all delivered via a single lightweight agent.

The combination of these solutions and services provides a highly detailed visibility of all endpoint activity, an absolute control of all running processes, and the reduction of the attack surface.

The value of this advanced cybersecurity managed service is based on these four principles:

panda

Panda Fusion 360

Advanced Security & Management

Panda Fusion 360 is a holistic solution that provides automated advanced security, centralized IT management, and remote support for all workstations, laptops and servers on the corporate network, including mobile devices and tablets. As it is a cloud solution, it is deployed rapidly without the need for maintenance or costly investments in IT infrastructure.

Panda Fusion 360 combines the best of two worlds. The advanced adaptive security provided by Panda Adaptive Defense 360 against all types of cyberthreats, and the cloud-based integrated management and remote support capabilities delivered by Panda Systems Management.

- Automated prevention, detection, containment and response against any present or future advanced threats, zero-day malware, ransomware, phishing, exploits and malwareless attacks.
- Cost savings thanks to centralized control and automation of infrastructure management tasks.
- The best support experience with proactive troubleshooting and remote, unobtrusive access to devices.
